ABSTRACT
Plants used by tribals in touch therapy have been enumerated. Touch therapy is an old practice among the tribals and other rural people in district of Telangana state. In this therapy locally available plant species are used for the prevention of the diseases. Adilabad is known for its significant forests and Adivasi forest dwellers which include various tribal communities existing since centuries and has a strong social, historical and cultural background. The tribal community of Adilabad district includes primarily Kolams, Naikpods, Pardhans, Gonds, Thotis, Chenchus and Mathuras were contacted and the information on 40 species belonging to 30 families from different pockets was documented. This knowledge has not been recorded earlier from the reported site.

Keywords: Ethnomedicine, Touch therapy, Tribals, Adilabad

INTRODUCTION
Touch therapy is an interesting method of treatment of ailments practiced by, among others, the Kolams, Naikpods, Pardhans, Gonds, Thotis, Chenchus and Mathuras tribes of Adilabad. The tribals believe that when a plant or plant part is made to touch the body or placed near the sufferer, it cures the disease. The method of treatment is suggested as more a magic than treatment and is called as magical cure of diseases (Jain 1963). They have a very good knowledge about the plant wealth. Documentation of traditional knowledge through ethnobotanical studies is very important for conservation and utilization of indigenous people’s knowledge. Initial studies in the last 50 years have been primarily devoted to the preparation of inventories of plants of a certain region or specific ethnic groups. Many scientists,naturalists and thinkers from outside the community of ethnobotanists, started emphasizing the importance of ethnobotanical inquiries and explorations.

MATERIAL AND METHODS
The authors conducted extensive field survey in different remote areas. Intensive field work was undertaken by the author for a period of five years from January 2007 to December 2011. Ethnomedicinal information was gathered from herbal medicine practitioners, ‘guniyans’, experienced old men and women of different tribal communities. The information recorded from one area has been cross checked and confirmed from that obtained from another area. The species were identified with the help of floras. The present study is aimed at the preparation of an inventory of plants and their medicinal uses practiced by tribals in Adilabad district, related to the traditional medicinal practices of local tribal communities such as Kolams, Naikpods,
Pardhans, Gonds, Thotis, Chenchus and Mathuras to achieve the following objectives viz., 1) To record the traditional medicinal practices of the Tribal communities of Adilabad district. 2) Botanical identification and herbarium preparation of the plants used by them. 3) To record the methodology followed by them in diagnosis during administration and curing of the diseases. 4) To document the scientific data for future reference/studies. 5) To study the other non-medicinal uses of the plants such as food, fodder and other uses.

Ravishankar (1990) On “Ethnobotanical studies in Adilabad and Karimnagar districts of Andhra Pradesh, India, Madhu (2010) submitted his thesis on “Ethnobotanical studies in Adilabad forest area medicinal plants and community”. Later on Ravi Shanker and Henry (1992) were published a note on the medicinal plant wealth of Adilabad district. Previous authors had done some exploratory studies on ethnobotany of the district; Dr. Koppula Hemadri (1994) published Shastravettalanu Akarshistunna girijana vaidyam. In the above studies inventories of medicinal plants used for human ailments were documented from few localities. Vedavathy, S; Mrudula, V & Sudhakar, A: Tribal Medicine of Chittoor District, Andhra Pradesh (India), Herbal Folk Research Centre, Tirupati, 1997. Pullaiah et al (1998) reported Ethnomedicinal plants of the district and they provided scientific and vernacular names for each species. “While Mubeen et al. (2004-2005) prepared an inventory of important medicinal plants of Adilabad district of Andhra Pradesh. Swamy and NSNS (2008) reported some ethnomedicinal plants used by tribes in the Nirmal forest division Adilabad District of Andhra Pradesh. The study aimed to record some interesting ethnomedicinal plants available and which are practiced by surrounding local adivasis of Nirmal forest division for their health care.

Enumeration

The species, arranged alphabetically by their botanical names, are enumerated in Table-1. Family, local name, Parts used and uses of plant parts in contact therapy as reported by local inhabitants are included.

</table>
9. *Butea monosperma* (Lam.) Fabaceae  
*Modugu*  
Root is collected on a Saturday and it is tied to the arm of woman to get rid of barrenness

10. *Calotropis procera* (Ait.) R.Br. Fabaceae  
*Gilledu*  
Root is collected on a Saturday and it is tied to the arm of woman to get rid of barrenness

*budaburija*  
Fruit is believed to be a snake repellent. Stem fibre is tied to the waist to cure ‘Dhuda’ (a form of diarrhea) in case of infants.

12. *Cissampelas pareira* L. Menispermae  
*adavibankath eega*  
After applying mustard oil on the leaf, it is shown to the fire and then fomented over boils to get suppuration.

13. *Clitoria ternatea* L. Fabaceae  
*Shankupushpi*  
A small piece of root (white variety) is tied to the right ear of the patient to cure headache

14. *Corchorus capsularis* L. Tiliaceae  
*parantalikura*  
Root is collected on a Sunday in early morning. It is tied to the waist of the baby to stop baby from crying.

15. *Crateva Magna* (Lour.) DC Capparaceae  
*Ulmiri chettu*  
A leaf is kept on the ear of the mother to expel the retaied placeta.

16. *Dendrophthoe falcate* (1.f.) Loranthaceae  
*Badanika*  
Plant growing on a Neem tree (*Azadirachta indica*) is collected during lunar or solar eclipse. It is tied to the arm to prevent bad dreams. Again, when this plant is growing on a Bel tree (*Aegle marmelos*). It is collected furing solar eclipse and tied to the waist of the patient to relieve hysteria.

17. *Diplocyclos palmatus* (L.) Jeffrey Loranthaceae  
*Lingadonda*  
Plant growing on a Neem tree (*Azadirachta indica*) is collected during lunar or solar eclipse. It is tied to the arm to prevent bad dreams. Again, when this plant is growing on a Bel tree (*Aegle marmelos*). It is collected during solar eclipse and tied to the waist of the patient to relieve hysteria.

18. *Elephantopus scaber* L. Asteraceae  
*Enugutamara*  
A small piece of root is tied to the arm to prevent bad dreams. The root is collected on a Suday early morning.

*Akujamudu*  
A small piece of root is inserted into the vagina of a pregnant woman to induce abortion

20. *Evolvulus nummularius* (L.) Convolvulaceae  
*Chitti elukacheviaku*  
Whole plant is tied around the head to get sound sleep

21. *Ficus racemosa* L. Moraceae  
*Ravi*  
Root is collected on a Saturday in the early morning from the cast of the plant. It is tied on the ear with a thread opposite to the affected part to relieve dental carries.

22. *Helicteres isora* L. Malvaceae  
*adavichamanti hi*  
A Fruit is hung around the neck of the patient to relieve post delivery pain

23. *Hemidesmus indicus* (L.) Sterculiaceae  
*sugandhipala*  
A small piece of root is hung around the neck to cure fever

24. *Lehocarpus frutescens* (L.) R.Br Apocynaceae  
A necklace of stem pieces is worn to cure rheumatism.

25. *Jasminum arborescens* Roxb Oleaceae  
*Adavi malli*  
Flowers are collected in the early morning. The smell of the flower is inhaled seven times to cure headache.

26. *Leucas aspera* (Willd.) Link Lamiaceae  
*Thummi*  
Root is collected on a Saturday or Sunday in the early morning, which is worn on the neck to cure cough. It also cures asthma and stomach disorder

</table>

### Conclusion

This paper reports forty-seven (47) ethnomedicial uses of forty (40) plant species (belonging to thirty (30) families) found in Adilaba district. Tribals believe these plants to have supernatural powers and collect them on specific days like: Saturday, Sunday, solar eclipse, lunar eclipse and Sankranti, and other tribe festival etc. The plants are worshipped by the collectors (who could be the traditional healer or the medicine man or at times the sufferer as well). During the collection of the plant parts the collector has to kneel down before the plant and pray to the jungle goddess to allow him to collect plant parts for medicinal use. The plant parts are also worshipped.

Before their use in touch therapy, or during the process of touch therapy, either the medicine man or the sufferer is to kneel down before his deity many such deities worshipped in some places in
the form of icon, but mostly symbolized through stone or a shape of wood and light Dhup. Then the plant part is tied to the arm or the waist or the affected part with a thread. This magico-religious belief attracts people both from the rural and urban areas. It is strongly believed by the people that the administration of the medicine in this method ensures its maximum effectiveness.
